Botanical Name: Coffea Arabica	Family: Rubiaceae	Common Name: Green Coffee Bean	Plant Part Used: Beans	Trademark Number: 6131987
Recommended Daily Dose: 500mg Capsules 2 C/Day	Shelf Life: 3 Years	MOQ: 1700 Bottles	Solubility: Water Soluble	Application: Anti-diabetic

Ingredients: Green coffee bean extract 50%, Green Tea extract 95%, Piperine 95%, Vitamin C from Acerola Cherry.

Mechanism of action anti-diabetic:
Green Coffee extract contains Chlorogenic acids which thereby act by inhibiting and improving insulin resistance and thereby ensure diabetic control.

Diabetes mellitus, a very common and multifaceted metabolic disorder is considered as one of the fastest growing public health problems in the world. It is characterized by hyperglycemia, a condition with high glucose level in the blood plasma resulting from defects in insulin secretion or its action and in some cases both the impairment in secretion and also action of insulin coexist.

Thereby the Green coffee extract present in PureBeanFit®, acts as a great influence on blood sugar management as it helps in reduction of blood glucose levels by the following.

1 **INHIBITION OF GLUCOSE ABSORPTION**
Chlorogenic acids (CGA) inhibit the activity of glucose-6-phosphatase, an enzyme involved in glucose production in the liver. CGA also reduces the absorption of glucose in the small intestine by inhibiting the sodium-glucose co-transporter (SGLT-1). This slows down glucose entry into the bloodstream, leading to better postprandial blood sugar control.

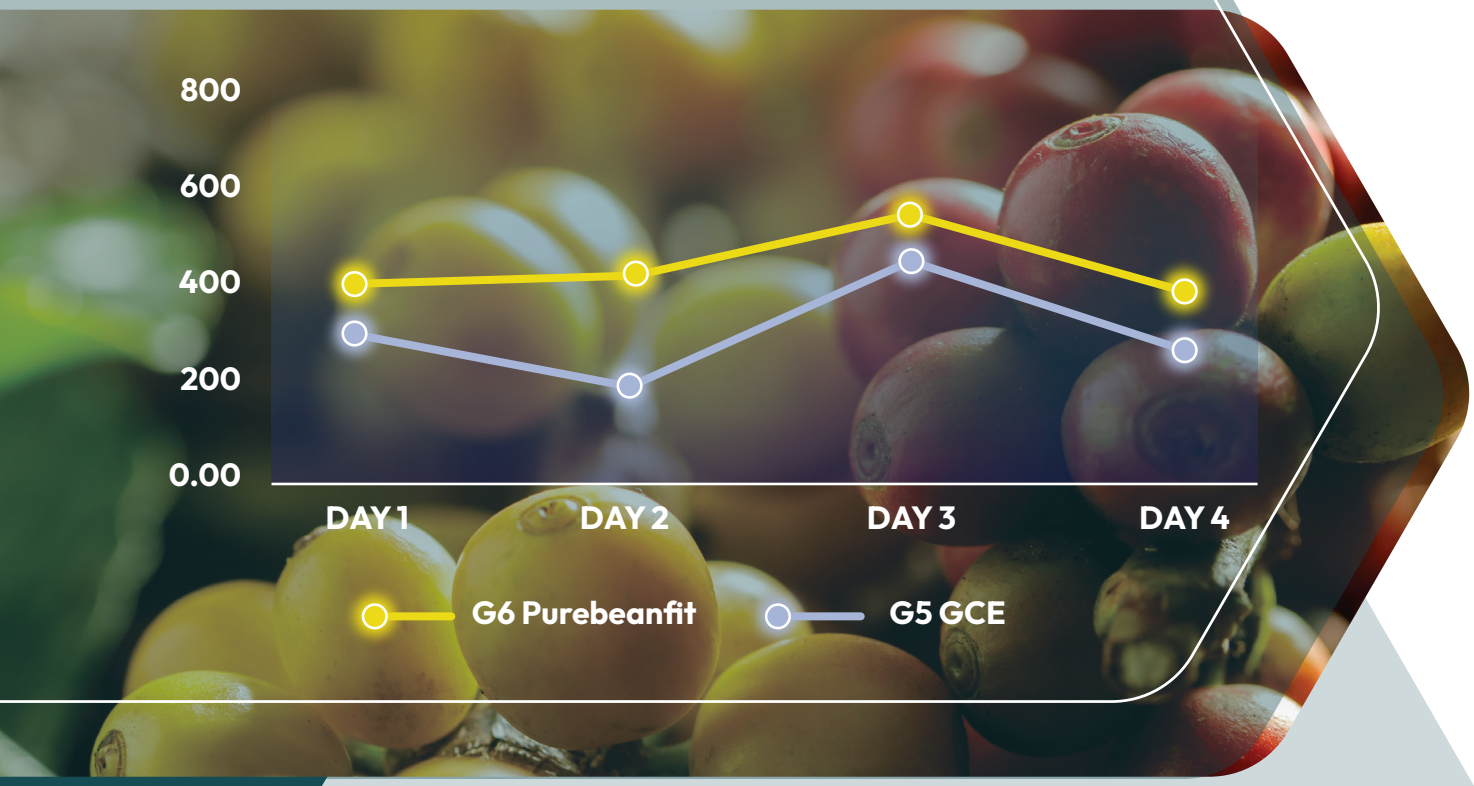

2 **IMPROVED INSULIN SENSITIVITY:**
Green coffee extract enhances insulin sensitivity by promoting glucose uptake in peripheral tissues.
It improves the insulin signaling pathway, reducing insulin resistance, a key feature of type 2 diabetes.

3 **REDUCTION OF OXIDATIVE STRESS AND INFLAMMATION**
The antioxidants in GCE, especially CGAs, combat oxidative stress and inflammation, both of which play significant roles in the development of insulin resistance and beta-cell dysfunction in diabetes.

Pre-clinical studies were conducted for PureBeanFit® in comparison to normal marketed green coffee bean extract at PRADO Pune. The objective of this study is to evaluate the efficacy of the Extract in Streptozotocin induced diabetes in Sprague Dawley Rats when administered by Oral route. The animals were kept for overnight fasting for approximately 16-14 hours. The streptozotocin (60 mg/kg IP) was injected by intraperitoneal route as a single dose on day 1 to induce diabetes. Animals will be screened for development of hyperglycaemia (fasting blood glucose >250 mg/kg) for 5 days after streptozotocin injection. The dose volume will not be exceeding 10 ml/kg body weight and actual volume to be administered were calculated based on the body weights of each animal.

Anti-Diabetes study for Comparison of PureBeanFit® with green coffee bean extract

Results:
The graphical representation depicts anti-diabetic data showing comparison between PureBeanFit® with green coffee bean extract. From the graphical representation above it can be concluded that, PureBeanFit®, reduces glucose levels upto 45% -50% , thereby causing reduction in blood glucose levels.
